

Standard Goose-Neck LED Reading Light

Our Synapse International Goose-Neck LED Reading Light features a revolutionary LED bulb in a PAR-30 configuration with a standard E-27 base (fits standard electric light fixtures in both the USA and Korea). This light is the equivalent of a 100 to 150 watt standard bulb but is an LED light with inherent low energy consumption (22 watts maximum) and long life (up to 20 years). The bulb includes a very quiet cooling fan that dramatically increases the performance of the bulb. The bulb comes in a standard goose-neck reading lamp, but may be removed and placed into any standard light fixture.

Lights are available in two colors: Warm White (3000K) and Cool White (5500K). Cost \$150

Purchase Your LED Reading Lamps Today!

You can have your own high-tech Goose-Necked Mini Reading Light for only \$75 or your own high-intensity standard Goose-Necked Reading Light for only \$150. Contact Synapse International sales at 405-227-0321 or by email at sales@synapse-int.com. Both reading lamps are in stock and ready for immediate delivery.

High-Tech Reading Lights

Goose-Neck Mini LED Reading Light

Synapse International is pleased to introduce the first LED reading light bright enough to replace standard reading lights. LED lights are the lights of the future requiring very little electrical energy to run and providing service for five to ten years without bulb

replacement. However, most LED lights are of low intensity – even the ones called high-intensity. Our Goose-Neck Mini LED Reading Light is a complete system including the lighting fixture, bulb and standard electrical plug for USA electricity (110V, 60Hz AC) or Republic of Korea electricity (220V, 60Hz AC). The flexibility of these LED reading lights is that they work efficiently on a wide range of voltages. (NOTE: The unit comes with a standard USA electrical plug. For Korea, please specify a Korean plug). Bulb fits a MR-16 fixture and is designed to fit this fixture only. Lights are available in two colors: Warm White (3000K) and Cool White (5500K). Cost \$75
